Ninja Air Fryer MAX PRO, 6.2L, Uses No Oil, Large Square Single Drawer, Roast, B...

£169.99 4.8★

Display, controls and day-to-day usability Product B wins here for sheer versatility, because its digital dual-zone interface is built around managing two drawers independently. That makes it easier to cook, say, chicken in one basket and chips in the other, then sync them to finish together. Product A is simpler, with a single-drawer setup that is easier to learn and quicker to use for everyday solo tasks. If you want the most straightforward control experience, Product A is excellent; if you want more cooking control and flexibility, Product B takes it.

Performance Product B wins on performance for families and mixed meals. Its 9.5L total capacity and two drawers let you cook more food at once, and the dual-zone design is ideal when dinner components need different temperatures or timings. Product A still performs strongly for its size, with a 6.2L family-size basket that is plenty for smaller households and most weeknight meals. For one basket, one food type, and fast results, Product A is more than capable. But for bigger batches and more complex meals, Product B is the stronger performer overall.

Build quality and design This is a close one, but Product A edges it for compact elegance. The AF180UKCP’s large square single drawer is efficient for worktop space, and the black and copper finish feels a little more premium and stylish for a UK kitchen. It is also easier to tuck away if your worktops are already crowded with a kettle, toaster, and coffee machine. Product B is solid and practical, but its larger two-drawer body demands more space and looks more utilitarian. If design and footprint matter, Product A wins.

Capacity and cooking flexibility Product B is the clear winner. Its 9.5L capacity and two drawers make it the better choice for cooking up to 8 portions, batch cooking, or serving a family with varied tastes. Product A's 6.2L basket is generous for a single-drawer model and is ideal for couples or smaller families, but it cannot match the flexibility of two separate zones. If you regularly cook different foods together, Product B is in another league.

Ease of cleaning This is effectively a tie, with a slight lean to Product A for simplicity. Both models have non-stick, dishwasher-safe baskets/plates, so cleanup is refreshingly low-effort after roast potatoes, breaded chicken, or veg. Product A has fewer parts and only one basket to deal with, which can make washing up feel quicker in practice. Product B has two drawers, which can mean a little more to clean, even though the dishwasher-safe design keeps it easy. If minimal faff is your priority, Product A has the edge.

Price and value for money Product A wins on value. At £129.99, it is £50 cheaper than Product B's £179.99, and that is a meaningful saving for a very capable air fryer with strong reviews and a premium finish. Product B is still good value if you will genuinely use the second drawer often, but you are paying extra for capacity and flexibility rather than better core cooking quality. For most households that do not need dual-zone cooking every day, Product A is the smarter spend.

Features and cooking modes Product B wins on features. It offers 6-in-1 cooking with Max Crisp, Roast, Bake, Reheat, and Dehydrate, plus the key dual-zone functionality that makes it more adaptable for real family cooking. Product A covers the essentials well with Air Fry, Roast, and Bake, and includes silicone tongs, which is a nice practical extra. But Product B's broader feature set makes it the more complete appliance for adventurous or busy cooks.

Overall user experience Product A is the better everyday choice for smaller households, couples, and anyone short on worktop space. It is cheaper, simpler, and still delivers the crisp, fast results Ninja is known for. Product B is the better choice for families, batch cookers, and anyone who wants to cook two different foods at once without compromise. Both are excellent, but they serve different kitchens.

Overall summary: if you want the best balance of price, size, and ease of use, buy Product A. If you want maximum flexibility, bigger capacity, and true dual-zone cooking for family meals, buy Product B. For most UK homes, Product A is the better value; for larger households, Product B is the more powerful all-rounder.

Winner: a

Product A is the better buy for most people because it delivers excellent Ninja performance at a much lower price, with a smaller footprint that suits typical UK worktops. Its 6.2L single drawer is big enough for family-style cooking without taking over the kitchen, and the simpler design makes it easier to live with every day. Product B is more capable, but the extra £50 only makes sense if you will regularly use the second drawer and need the larger 9.5L capacity.

Buy Product A If...

Buy Product A if you want a compact air fryer that fits more easily on a UK kitchen worktop and you mostly cook one meal at a time. It is ideal for couples, small families, and anyone who wants a premium Ninja without paying for features they may not use. It also gives you a strong saving versus Product B.

Buy Product B If...

Buy Product B if you regularly cook full family dinners, want to air fry two different foods at once, or batch cook for the week. It is the better pick for bigger households where the extra 3.3L capacity and dual-zone control will be used often. If flexibility matters more than footprint or price, this is the one to get.
